HUMBOLDT-UNIVERSITÄT ZU BERLIN

**We are looking for fellows (m/f/d) with a background in economics (period of time by arrangement; ideally 6 months or more)**

Research Group 4 (Frameworks for Data Markets) at the Weizenbaum Institute in Berlin examines data usage in the digital economy from legal, psychological and economic perspectives. Our research focuses on the functioning of digital markets and the opportunities and risks of data trading.

Among others, we are currently engaged in investigating the following questions with economic impact:

- How should a (European) data strategy look like?
- What are the effects of personalised prices and how should they be regulated?
- How should the use of data as a counterperformance be evaluated?

For our fellow program we are specifically looking for economists who are conducting research on these or similar questions and are interested in an exchange with legal experts.

The fellowship at the Weizenbaum-Institute, Hardenbergstraße 32, 10623 Berlin (period of time by arrangement; ideally 6 months or more) will be adequately supported financially.
